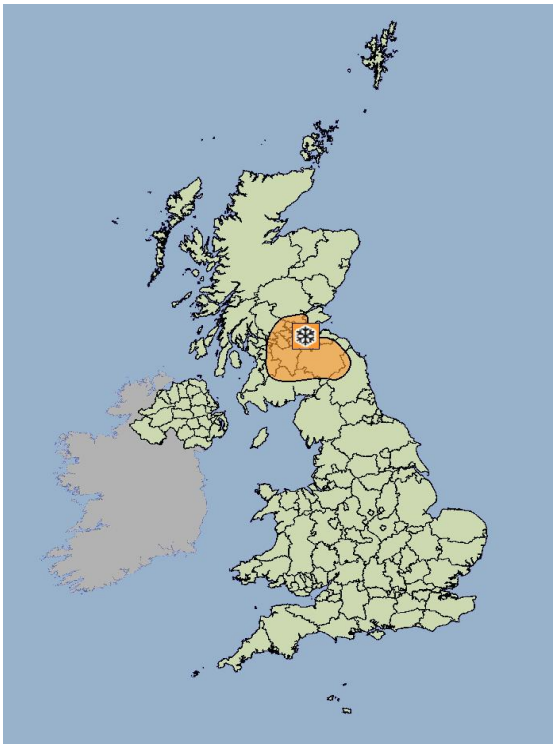
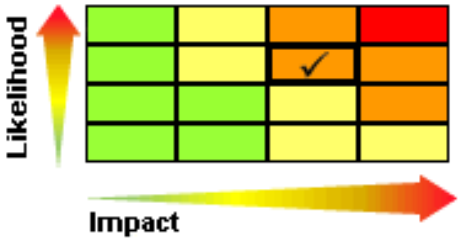
National Severe Weather Warning Service





Chief Forecasters Assessment
As storm Doris moves eastwards across central parts of the UK on Thursday a spell of heavy snow is expected on its northern flank. This will accompanied by strong winds with drifting of snow possible. There is some uncertainty over the track of Doris and therefore over the extent of snowfall, but confidence is now higher for disruptive snow to affect the amber area.

The Met Office have issued an **Amber Warning** of **Snow**

Valid from **02:00 on Thu, 23rd Feb 2017** until **18:00 on Thu, 23rd Feb 2017**

Heavy snow is expected on Thursday. Local accumulations at low levels of around 3 cm are possible, but accumulations of 10 to 20 cm above around 100 metres are likely, with 20 to 30 cm falling on hills above 300 metres. This will lead to disruption to transport and perhaps power supplies.

The warning has been updated to include a greater part of the Central Lowlands.
